

For Immediate Release: 3rd October 2008

Control Launch RocketPort Infinity and RocketPort Express

Introducing high-performance, next generation multi-port device ranges.

Today, Control launches its latest range of products. Infinity and Express, part of the RocketPort range, which has been designed for ultimate flexibility. Intelligent adapters allow the user to attach more devices or service more users without the server slowing down as more applications are run.

By using the RocketPort's range of products the user is able to maximise serial performance via Control's exclusive high-performance Unity ASIC Chip. Infinity provides speeds of up to 921Kbps with interface speeds of up to 460 Kbps. The product family includes models from 4-ports to 32- ports with up to 128-ports per system and supports 3.3v or 5v PCI Bus. Infinity cards are low-profile and are for use in both standard PC's and low profile servers, all products support software selectable RS-232/422/485 serial communication modes. Prices start from £365.00 retail.

RocketPort Express is Control's next generation multi-port serial controller. This family of controllers enable numerous serial devices to be interfaced from one PCI Bus slot and allows simultaneous data transfer on all ports. RocketPort Express quad cable and octacable products produce speeds of 921Kbps and compatible with 1x, 4x, 8x and 16x-Lane express serial expansion slots. The RocketPort Express is available with DB9M, DB25M and RJ45 connectors and supports software selectable RS-232/422/485 serial communication modes. Prices start from £347.00 retail.

These high performing, robust and unique hardware solutions are cost-effective and extremely efficient. Control are committed to providing industries with versatile, reliable and cost effective products of the highest quality and are continually developing new solutions for a wide range of products. Dealer pricing is available from Control's dedicated sales team at info@control.co.uk.
